UNIFLO

Control Valve

This versatile design can be used for compressible and non-compressible fluid service application in valve sizes ranging from 3/4 through 18" in pressure classes 1500, 2500, 3000, 4500.

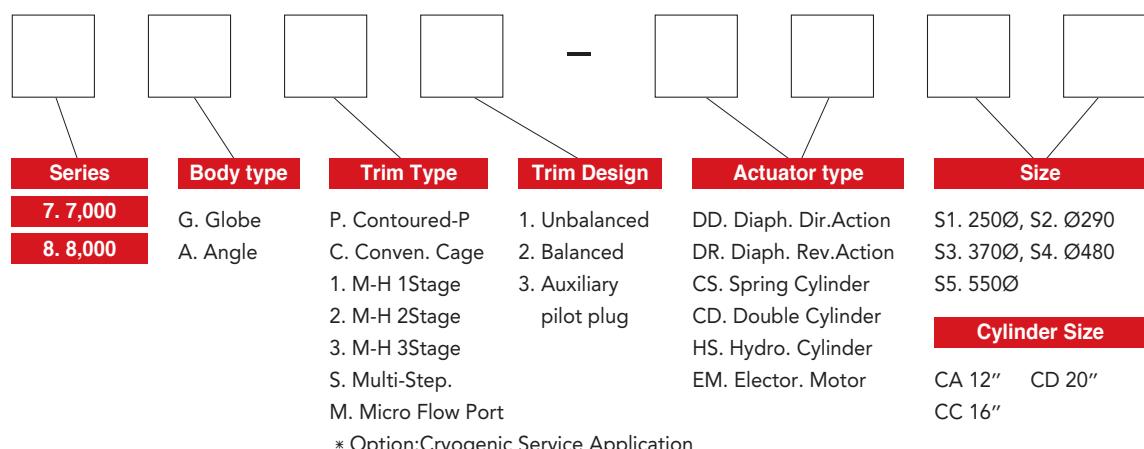

7000, 8000-Series valves are supplied with either direct or reverse acting actuators plus a number of optional accessories to satisfy most final control element requirements. Our 7000, 8000-Series valves also permits interchangeability of actuators and trim types within certain valve sizes for simplifying control changes in the field. This feature combined with a wide selection of standard and optional trim assemblies provides optimum control and has proven to be economical should field conversion be necessary.

UniFlo engineers long experience success with fluid control devices carries through with the 7000, 8000-Series control valve & Actuator series to meet the needs of the power and process industries.

Model Numbering System

Specification

Body Size	1" to 20" (Optional / up to 36")
Body Style	Globe, Angle
Pressure Rating	ANSI Class 150 to 2500, 3000, 4500
End Connection	Flanged, Socket welded, Butt welded, Ring joint type, etc.
Trim Design	Unbalanced, Balanced and Auxiliary pilot Conventional Cage, Multi-hole 1stage, Multi-hole 2stages, Multi-hole 3stages Multi Step, Micro Flow Port.
Bonnet Type	Bolted design, Pressure seal design Standard, Extension, Cryogenic, Bellows seal
Seat Leakage	ANSI B16.34 / FCI 20-1 Class IV(Standard), V(Optional), VI(Optional, Soft seat) MSS-SP-61(Optional)
Characteristic	Equal %, Linear, Modified %, Quick opening Custom engineered

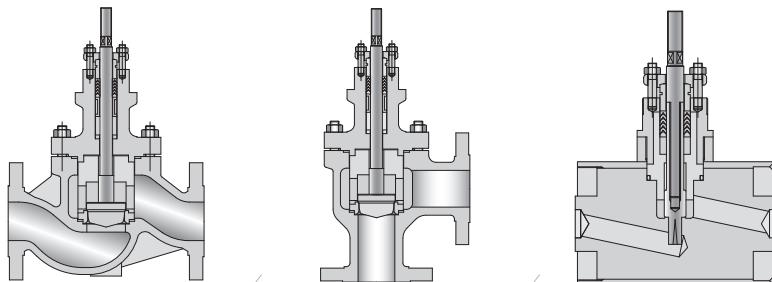

Standard Materials

Body & Bonnet	A216 WCB / A105, A217 WC6 / A182 F11, A217 WC9 / A182 F22, A182 F91, Stainless steel, Tungsten, Titanium, Monel, Hastelloy, etc.
Trim	316SS, 410SS, 420SS, 420J2 SS, 630SS F-11, F-22, F-91 with Stellite overlay Inconel, Others special materials.
Balance Seal	RTFE "U" Seal Carbon with metal seal Graphite with Inconel seal
Rangeability	15:1, 30:1, 50:1 to 800:1 Custom engineered

7000 Series Body Valve

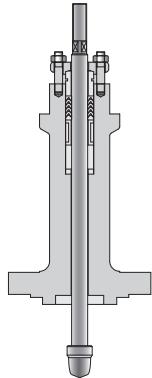

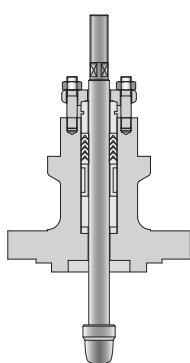

The 7000-Series valve is available in two basic body styles of either globe angle many parts are interchangeable with the exception of the valve bodies. The angle pattern has an optional venturi seat which may be specified in order to provide additional protection to the valve outlet.

GLOBE BODY

ANGLE BODY

TEFLON BODY

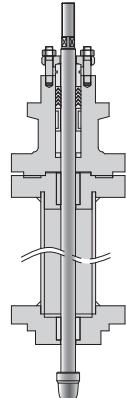

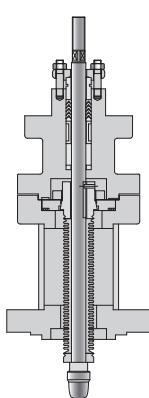

STANDARD BONNET

EXTENSION BONNET

Provides for a positive metallic gland seal within the rated pressure and temperature of the bellows material selected. Use on hazardous, lethal service an auxiliary packing box in the upper bonnet serves as a back up seal in the unlikely event of a bellows failure.

Permits stagnated moderate temperature gas to flow within the bonnet which protects the packing from the extremes of temperature produced by the line fluid. Normally constructed in stainless steel it operated to -196°C.

BELLOWS SEAL BONNET

CRYOGENIC BONNET

7000 Series Body Valve

7000 Series Cryogenic Service Application

Reliability and ease of maintenance are essential features of any good control valve and to this end the UniFlo range of cryogenic service valves have been kept as simple as possible.

The number of components has been kept to a minimum and ease of access to the trim is straight forward through the removal of the bonnet retaining nut and lifting of the complete bonnet and plug assembly.

Bodies are normally supplied in stainless steel or bronze with a stainless steel extension of the suitable length for the installation position and temperature as low as minus 268°C(450°F). The extension can be fitted with a cold-box flange of any shape size required.

Trim construction is based on the traditional UniFlo top & retainer guided quick change seat design and incorporates a soft seal in PTFE or RTFE when bubble tight shut-off is required. Other types of trim such as balanced, cage are available when required. End connection can be flanged, screwed, socket or butt-weld end plus pipe stabs as necessary. All body components are cleaned and degreased suitable for oxygen service and the end connection suitably masked after testing to prevent ingress of foreign matter, moisture.

7000 Series Microflow Control Application

Increasing technical demands by user have persuaded UniFlo to rethink the standard approach to this specialized field of microflow control. Possible approaches and solutions were proposed and through the process of testing both under laboratory and field conditions a new solution took from MCV are designed and manufactured for the express purpose of controlling fractions of the capacity of flow through 1" and smaller line sizes. The preference of the research facilities and process industries for scaled-down dimensions with proportionate economy in cost has been the prime factor in making them available.

No omission has been made in paralleling the design, construction and characteristics of performance, interchangeability or available accessories normally associated with larger valves.

MCV are the highest quality products available for low flow control and are well suited for those applications requiring precise control in very critical areas. The valves proven ability to function under the most adverse condition makes it a vital tool in research and process as the final control element.

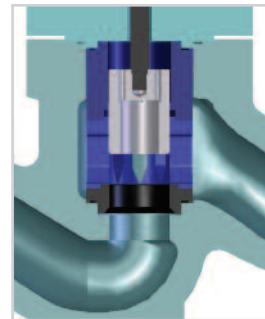

At All Teflon Body Application

AT Series is designed for those applications where severe corrosion resistance is required. With its varied trim options and configurations, it is a most versatile valve for corrosive services, features include:

8000 Series General Application

Conventional cage / balanced singel seat port throttle

General purpose cage guided valve trim which can be used in most clean compressible and non-compressible fluid services for both modulating and on/off control. The balanced plug design reduces actuator force requirements thus permitting use of smaller, less expensive actuators while maintaining tight shut-off capability.

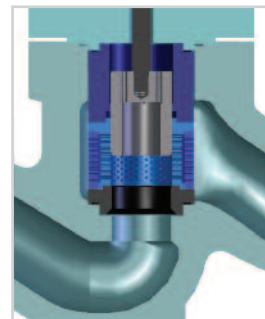

Conventional Cage

Multi-hole 1stage, 2stages Trim

This trim offers some of the advantages of the multiple stages Multi Hole Trim.

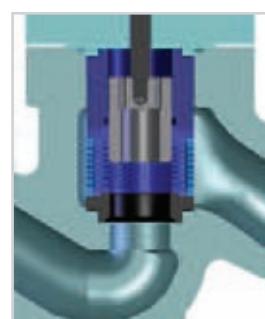

Single stage trim reduces the damaging effects of flashing and cavitation when used with compressible and non-compressible fluids. Turn down ratio, seat leakage, dBA levels, flashing and cavitation reduction are based upon the individual design criteria of each trim. The single stage trim can be used in place of other port throttling trim styles, size a available in 2inch through 18" valves with balanced and unbalanced plugs. / Option 20"-36".

Multi-hole 2stages

Multi-hole 3stage Trim

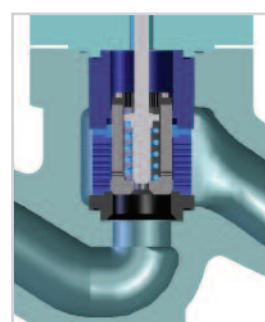

UniFlo multi-hole multi-stage trim assembly in unbalanced or balanced single seat designs provides multiple pressure breakdowns for noise abatement in critical pressure drop steam or gas applications. This trim is also equally effective in high pressure drop liquid applications for preventing cavitation and trim erosion damage.

Multi-hole 3stages

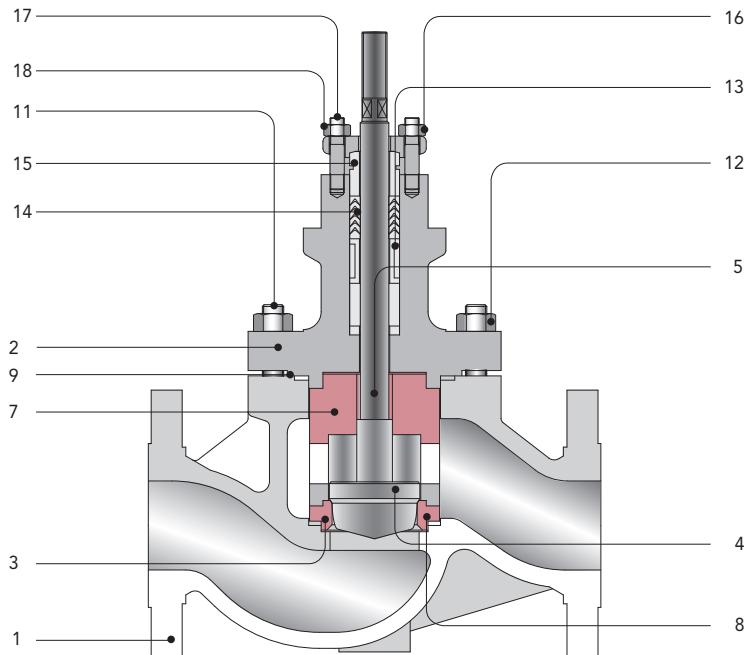

Auxiliary pilot plug trim

The trim is designed primarily for high pressure differential applications where tight shut-off is essential. Such applications include steam and water pressure reduction, steam throttling to atmosphere or to condenser, isolation, super-critical boiler start-up and variety of other uses in steam and water control system. The design of the APT trim provides tight shut-off, excellent control and rangeability, but requires low actuator thrust which provides rapid response. It is also lower in cost. The trim is basically a port throttling single seat design with main and pilot plugs working in APT. The large main plug is the control device. Inside the main plug is the pilot plug connected rigidly to the valve stem, when closing the main plug seats first as a large balanced plug and this is rapidly followed by the closing of the pilot plug. At this point, the plug from an unbalanced assembly and up stream pressure helps create high seating force resulting in reliable shut-off as high as class V. To open the actuator need only lift the small pilot plug to cause the main plug to once again become balanced.

General Selection Information

Trim Cv Calculation

A full description of the procedures used for calculating the Cv on various is detailed in the UniFlo sizing & selection program.

Body Selection

Generally, the valve body must be capable of supporting the selected trim design without producing excessive velocity. The following tables can be used as a guide for determining the maximum recommended body velocities for liquid and gas/vapor applications.

Recommended maximum inlet and outlet velocities for liquid service

Maximum Recommended Velocity

Valve Size	Valve Body Material					
	Carbon Steel		Alloy Steel		Cu / Ni Alloys	
	m / s	Ft / s	m / s	Ft / s	m / s	Ft / s
1"~12" / 25A~300A	13.1	43	15.8	52	7.6	25
14"~24" / 350A~600A	10.7	35	13.1	43	6.4	21
Above 24"	7.6	25	10.7	35	4.6	15

Recommended maximum inlet and outlet velocities for gas/vapor service

Maximum Recommended Velocity

Allowable Noise Level(dBA)	Inlet				Mach Number
	m / s	Ft / s	m / s	Ft / s	
< 85	144	475	253	830	0.3

Trim Inherent Rangeability

The inherent rangeability of a valve trim is dependent on a number of factors including size and style. The valves detailed below provide a general guideline to the maximum achievable values.

Trim Size	Standard Rangeability
Up to 8"	50 : 1
Up to 8"	60 : 1
Up to 8"	70 : 1
Up to 8"	80 : 1
Special Application Maximum Rangeability	800 : 1
